

## Robex Graffiti Wipe Out Liquid & Gel

Safe, effective, eco-friendly graffiti removal

- Liquid & Gel formula available
- Application in damp weather
- No hazard Labeling
- Removes most types of graffiti quickly
- Performs well on masonry & porous surfaces
- Rinses with water
- Fully biodegradable

Recent legislation has restricted the use of many of the solvents previously used in graffiti removal or imposed strict labelling requirements and safety precautions. Robex Graffiti Wipe Out Liquid & Gel uses modern solvent technology to give excellent performance on a wide range of surfaces combined with a low risk to the user and environment. Graffiti Wipe Out Liquid & Gel will remove graffiti such as spray paint, household paint, marker pen or crayon from hard surfaces both indoors and outdoors. The liquid formula performs well in spray and wipe applications on non-porous surfaces with the gel formula designed to cling to vertical surfaces with longer contact times possible on porous surfaces or difficult jobs.

Graffiti Wipe Out Liquid & Gel will remove graffiti such as spray paint, household paint, marker pen or crayon from hard surfaces both indoors and outdoors.

### • Application

**Graffiti Wipe Out Liquid** performs well in spray and wipe applications on non-porous surfaces including Formica panels, glass, tiles and most plastics. It may be possible to remove graffiti from some painted surfaces if short contact times are used. Apply with a brush or spray over the entire area of the stain. Allow time to act if required then wipe off with a damp cloth or rinse off with water. Wipe the area thoroughly afterwards with a clean cloth or absorbent wipe to remove any residue.

**Graffiti Wipe Out Gel** is designed to cling to vertical surfaces and the gel formula means longer contact times are possible on porous surfaces or difficult jobs.

Apply with a brush or spray over the entire area of the stain. Allow 10-15 minutes to act. Use a stiff brush to agitate stubborn graffiti and hose or rinse off with water, preferably using a high pressure cleaner where possible.

Graffiti which has been left for long periods on a porous outdoor surface such as concrete or brickwork may require longer contact times or more than one application. On masonry, it is safe to use long contact times (more than 1 hour) if necessary.

### Paint Stripping

Robex Graffiti Wipe Out Liquid & Gel will strip many types of paint from wood and metal (by the immersion method). Contact times of at least 30 minutes should be allowed.
